Architectural & Paint Defoamers

Product Name	Description
TRANS-15	Water-based emulsion with APEO free surfactants and hydrophobic silica.
TRANS-701	Concentrated hydrophobic silica and wax dispersion.
TRANS-708	Concentrated defoamer using hydrophobic silica and wax with an added nonionic defoamer for further foam control.
TRANS-711	Polyglycol-based defoamer with hydrophobic silica dispersed in a small amount of silicone.
TRANS-713	Hydrophobic silica solids in mineral oil with proprietary nonionic wetting and defoaming agents.
TRANS-725	Hydrophobic solids in mineral oil. Good for grind and let down stages with rapid and persistent bubble break, secondary matting benefit when used in higher concentrations.
TRANS-7004	Hydrophobic solids in mineral oil with proprietary modified polysiloxane ether. Easily dispersible in water
TRANS-7009	Polyglycol and light mineral oil carrier defoamer yielding persistent foam control with little to no effect on gloss. An economical alternative for organic siloxanes.
TRANS-7039	General architectural paint defoamer, good for grind and let down stages. Provides secondary leveling benefits through nonionic surfactants.
TRANS-7058	Architectural paint defoamer with a balanced hydrophobic package. Contains proprietary modified polysiloxane ether to allow for wetting and leveling properties.
TRANS-7285	Hydrophobic wax dispersed in mineral oil with polyol ester surfactants.

Adhesive Defoamers

Product Name	Description
TRANS-714	Metallic stearates in light mineral oil. Provides color suspension and air release in viscous medias.
TRANS-719	Organic defoamer in mineral oil carrier. Provides excellent release of air in latex and elastomeric matrixes.
TRANS-7116	Metallic stearates and dispersed wax emulsion in light mineral oil. Provides good release of microfoam in vinyl acrylic media.

Ink & Printing Defoamers

Product Name	Description
TRANS-714	Metallic stearates in light mineral oil. Provides color suspension and air release in viscous medias.
TRANS-7663	Hydrophobic solids dispersed in vegetable oil carrier.

Other Coating Defoamers

Product Name	Description
TRANS-275	Wetting agent formatted for epoxy work. Reduces surface tension to provide for air free film. Provides wetting and defoaming properties.
TRANS-7113	Hydrophobic silica suspended in a polyalkane.

Surfactant & Ester Defoamers

Product Name	Description
AC-24	Wetting agent for Deco paints that provides flow and antifoam properties.
TRANS-412	Synthetic polymeric antifoam, 100% active. Great as a stand-alone water-based defoamer or booster additive.
TRANS-3988	Synthetic polymeric antifoam, 100% active.
SI 045	Silicone polyether defoam booster.
