

NOW AVAILABLE!
High Quality Colloidal Silica

Our manufacturing process produces a consistent distribution pattern to ensure a low percentage of off size particles and contaminants.

Custom formulas for any application

AMS will manufacture colloidal silica to your specific requirements, offering controlled particle size distribution not available from our competitors. We also offer winterized versions of our core products.

Typical functions and applications:

- Rigidizing and binding agent for refractory and ceramic materials
- Anti-slip properties for paper
- Density gradient for most applications
- Retention aid for paper making
- And more!
